SPECIAL FIRE FIGHTING PROCEDURE:

NIOSH/MSHA -approved self-contained breathing apparatus should be worn. Use water spray to cool fire exposed structures and disperse vapor cloud if fire is not present.

SECTION VI - HEALTH HAZARD DATA

EFFECTS OF OVEREXPOSURE:

ACUTE: Nausea and/or narcosis.

CHRONIC: May cause nerve damage. This product contains small amounts of vinyl acetate monomer. ACGIH evaluated vinyl acetate(1993) as an A3- Animal Carcinogen. Available evidence suggests that the agent is not likely to cause cancer in humans except under uncommon or unlikely routes of exposure. The International Agency for Research on Cancer (IARC) published a monograph on vinyl acetate (1995). In this monograph IARC indicates "there is inadequate evidence in humans for carcinogenicity of vinyl acetate. There is limited evidence in experimental animals for carcinogenicity of vinyl acetate." Normally, this lack of conclusive evidence would place a substance in the IARC Category 3 classification (Not classified as a human carcinogen). However, because vinyl acetate is metabolized to acetaldehyde, which has an IARC 2b (Possibly carcinogenic to humans) classification, it also has been listed under Category 2B.

TARGET ORGANS: THF-may cause liver or kidney abnormalities. Acetone, based on animal data, may cause eye or kidney damage. -

SIGNS AND SYMPTOMS OF EXPOSURE:

Irritation to eyes and mucous membranes. Can also cause skin dryness. Liquid ingestion may result in vomiting. Numbness, tingling and weakness of arms and legs.

CONDITIONS PRONE TO AGGREGATION BY EXPOSURE:

Respiratory ailments.
